

CAS PIA®

The new version
available from
December 9

The new CAS PIA version 2.0 – now even more mobile with Mobile sync

Mobile sync – your data is always at hand

You can now synchronize your contacts, appointments and tasks with your mobile device – and in both directions. This means that changes made on your mobile device are also transferred to CAS PIA. The Microsoft ActiveSync® protocol is used for data transmission.

Excellent support

With CAS PIA 2.0 you will be able to find a solution even faster: the enhanced online help's new search features enable you to find the answer you are looking for by searching all information in the online help, FAQ database and examples for users.

Getting started could not be easier

All the information new users need to get started is now available in one easy-to-use view.

Shows the number of search results

No matter whether you are searching for addresses, appointments or tasks, you will always be able to see the number of data records found.

Recurring tasks

If you have tasks that must be completed on a regular basis (monthly newsletters, regular

Web site assessments, etc), you can use a recurring task – just like a recurring appointment – as a reminder.

Mail merges made easy

In CAS PIA 2.0 you can save the current user's sender information as mail merge fields in a form letter. This means the letter will automatically contain the sender's address data.

Controlled export

All data firmly under control: The CAS PIA administrator can determine who is and who is not allowed to export data records as CSV files from CAS PIA. This means you can meet data protection requirements.

Enhanced CAS PIA dossier

CAS PIA now stores all correspondence with a company in one dossier – from notes taken during a phone call through to e-mails. You can also group the correspondence according to record type: all phone calls, all documents, all e-mails, and so on. And you can use the direct search feature to search for specific information stored in the dossier.
